Help the Shortest Blades Meet the Highest Standards

Appear® fungicide has two components that work together to enhance control of Pythium and anthracnose while improving summer stress tolerance and overall turf quality—all more effectively than the Chipco® Signature® fungicide program. On the inside, a phosphite fungicide is immediately available and quickly absorbed by the plant in its most active form. On the outside, a unique pigmented formulation provides turf a deeper green color that results in greater quality. Appear can be used under extreme summer temperatures, and it mixes easily with Daconil Action™ fungicide or Secure® fungicide in a 14-day control program on greens and tees.

Compared to Signature, the Grass is Greener with Appear

Improved Disease Protection on the Inside

With no known resistance, Appear contains a truly systemic mode of action that makes the active ingredient, a potassium phosphite, quickly available within the plant to outperform the competition in controlling diseases such as:

- **Pythium** (foliar blight, damping off, root and crown rot)
- Anthracnose
- Summer stress complex
Protection from the Effects of Summer Stress on the Outside

A unique pigmented formulation, Appear provides unprecedented turf safety even at higher use rates when applied under extreme temperatures. Upon application, Appear:

- Provides improved turf quality and a deeper green appearance during periods of environmental stress.
- Exhibits excellent turf safety from a potassium phosphite even in extreme temperatures, unlike low pH fungicides.

Fit to Complement

Appear is formulated to easily mix with Daconil Action™ fungicide or Secure in a 14-day control program on greens and tees. Combining Appear with Daconil Action provides two forms of protection inside and outside the plant for a double-stacked protection against turf stress.

“Double-Stacked” Protection Inside and Out
