Contend™ fungicide from Syngenta is now available in many states for use on golf courses to control snow mold. Contend contains four active ingredients in three different FRAC groups to protect fairways from pink and gray snow mold for more than 120 days.

**TECHNICAL ATTRIBUTES**

Together, one new active ingredient (Solatenol®) and three well established active ingredients complement each other for extended control of snow mold, and multiple modes of action provide better performance.

- **Solatenol (FRAC Group 7)** (trade name for Ben佐vindiflupyr), a new active ingredient for the turf market, is a third generation SDHI that strongly binds to the plant’s waxy layer and slowly penetrates the tissue. This binding, plus translaminar activity and extremely high potency, delivers long-lasting disease control.
- **Difenconazole (FRAC Group 3)**
- **Propiconazole (FRAC Group 3)**
- **Azoxystrobin (FRAC Group 11)**

**PACKAGING AND USE RECOMMENDATIONS**

The Contend Snowpack includes Contend A and Contend B, which should be tank mixed together. One Snowpack treats three acres providing 120 days of disease control.

Labeled use rates per 1,000 ft² (according to 2(ee) recommendation):

**APPLICATION TIMING AND ACTIVITY**

The four active ingredients work together and move throughout the plant to help control snow mold at multiple stages of disease development.
