

Provaunt Insecticide Mole Cricket Assurance Program

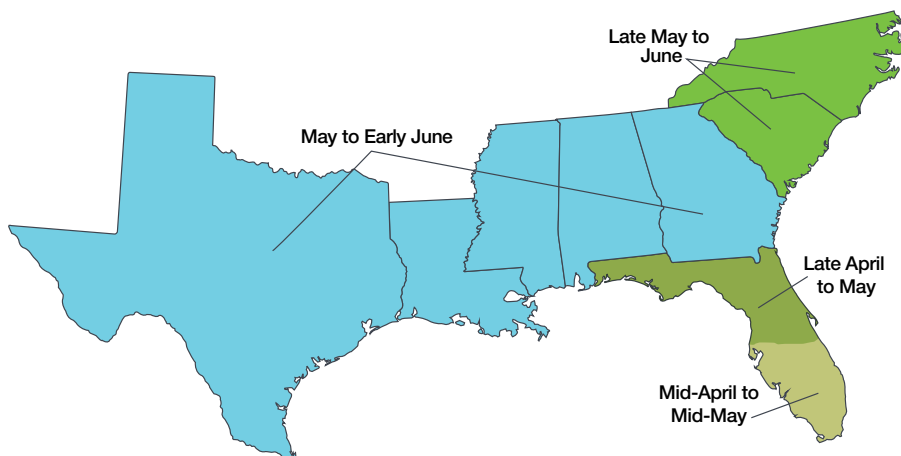

With Provaunt® WDG insecticide, Syngenta is committed to the performance of its products that are used to control mole crickets on golf courses. If your Provaunt application fails to provide adequate control for early-stage mole cricket nymphs, and an additional re-treatment is required, Syngenta will recommend and provide the appropriate product for curative control as described in this Assurance Program.

To qualify for the Provaunt Insecticide Mole Cricket Assurance Program, purchases of Provaunt must be made between October 1, 2020 and June 1, 2021, and applied by July 1, 2021. A minimum of 35 acres must be treated to qualify for this Assurance Program.

Provaunt Insecticide Mole Cricket Assurance Program

Apply **two applications of Provaunt® WDG at 18 oz/acre** for early stage nymph control from May through June.

- The first application should be made at peak egg hatch and/or when small nymphs are present as determined by a soap flush. This will vary by geography and timing can be checked with your local university extension department or turf entomology website.
- The second application made 2–4 weeks later.
- Provaunt is tank-mix compatible with grub control products including Acelepryn® insecticide and Meridian® insecticide.
- Water in with 1/8 inch of water to obtain thorough, uniform coverage.
- Best results achieved with early morning applications when leaf surface is wet.

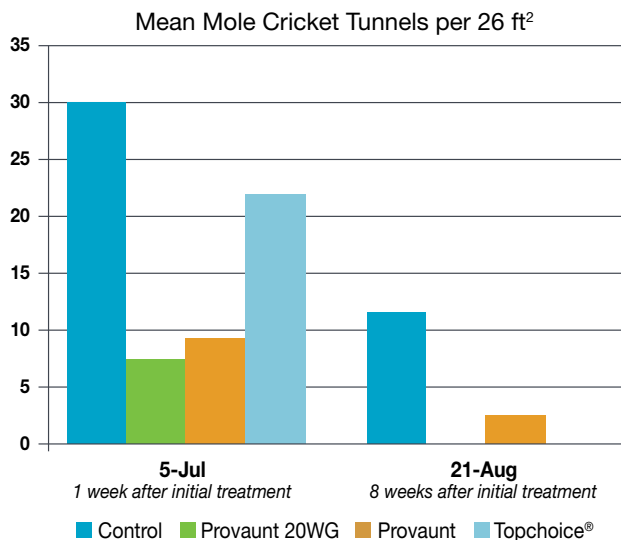

Weather conditions and other variables may impact peak egg hatch in each geography.

A general guideline for timing of the first application is as follows:

1. South Florida: mid-April to mid-May
2. North Florida: late April to May
3. Georgia, Alabama, Mississippi, Louisiana, Texas: May to early June
4. North Carolina, South Carolina: late May to June

Provaunt Insecticide Mole Cricket Control Program Field Results

Comparison of Provaunt Formulations for Mole Cricket Control

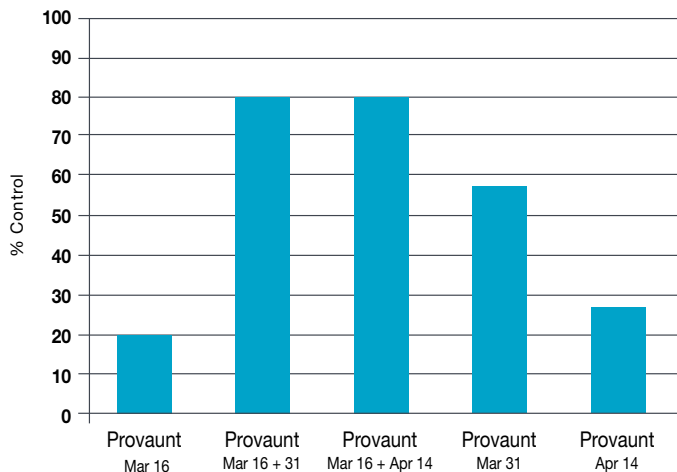

Both Provaunt & Provaunt 20 WDG formulations were applied on June 26 and July 25. Topchoice was applied at 87 lbs/acre on June 26 (just one application). Adam Dale, University of Florida, 2018

Provaunt vs. Untreated for Mole Cricket Control Brandenburg, NC State University, 2013

Provaunt applied 10 and 24 Jul. Pictures taken 4 Oct - 86 DAIT.

Provaunt Provides 90 + Days of Control Data collected 100 days after first application

Provaunt 30WDG applied at 12 oz/acre. Data collected on June 24 (100 days after Mar 16 application).
Brandenburg, Puerto Rico, 2014

Provaunt Insecticide Mole Cricket Assurance Program Terms and Conditions

To qualify for the Provaunt Insecticide Mole Cricket Assurance Program, purchases of Provaunt must be made between October 1, 2020 and June 1, 2021, and applied by July 1, 2021. A minimum of 35 acres must be treated to qualify for this Assurance Program. You must follow label guidelines regarding application rates and timing for your region in order to participate in the Assurance Program. In the event that you determine you have not achieved 80% control for 90 days and you have complied with the terms and conditions described in this Assurance Program, including following all label instructions, contact a Syngenta territory manager within 7 days of noted unsatisfactory performance (control less than 80% for 90 days). If Syngenta determines that additional treatment is needed, Syngenta will recommend and provide the appropriate product for curative control for those turf acres, excluding putting greens, that require additional control. Syngenta will not pay for the application or other costs associated with rescue treatment. Syngenta reserves the right to investigate each product performance complaint, to verify all purchases, or modify or discontinue this Assurance Program at any time without prior notice.

¹Trials conducted using treatment rates and mixing partners commonly recommended in marketplace.

If you have questions about this Assurance Program, contact your local Syngenta territory manager, visit GreenTrust365.com or call toll-free 1-866-SYNGENTA.
