

# Preventive Fairy Ring Assurance

**Protect your greens with the Syngenta Fairy Ring Assurance.** Fairy ring is unique because its pathogens cause symptoms indirectly by changing the chemical and physical properties of the soil. The causes and symptoms can vary, which is why curative fungicides can be unreliable. For the best fairy ring control, a preventive strategy should be used. When you follow the prescriptive fungicide program developed by Syngenta experts, tailored to your region as noted below, you are guaranteed season-long fairy ring control.\*

	Bermudagrass and Seashore Paspalum Putting Greens		Creeping Bentgrass Putting Greens
<b>Application #</b>	Fairy ring and Mini ring Program (FL and HI)  Initiate applications in spring when soil temperatures are consistently above 70°F and turf is actively growing (typically March).	Fairy ring and Mini ring Program (AL, AR, GA, MS, NC, SC, TN, VA)  Initiate applications in spring when soil temperatures are consistently above 60°F and turf is actively growing (typically March-April).	Fairy ring, Summer patch, Take-all patch Program (AL, AR, CO, GA, IA, ID, IL, IN, KS, KY, MI, MO, MS, MT, NC, ND, NE, OH, OK, OR, SC, SD, TN, TX, UT, VA, WA, WI, WY)  Initiate applications in spring when soil temperatures are consistently above 60°F and turf is actively growing (typically March-April).

## THE FAIRY RING PERFORMANCE ASSURANCE:

- Prevent the fairy ring fungus from growing with a season-long assurance program in the following states: **AL, AR, CO, FL, GA, HI, IA, ID, IL, IN, KS, KY, MI, MO, MS, MT, NC, ND, NE, OH, OK, OR, SC, SD, TN, TX, UT, VA, WA, WI, WY.**
- Maintain thatch and soil properties favorable for turf health.
- Select timing and product rotation based on geography and grass type.
- Follow the prescribed solution based on your regional program, follow application timing and product use rates recommended for effective fairy ring control on putting greens.
- Follow Syngenta soil temperature alerts on [GreenCastOnline.com/SoilTemperature](https://www.GreenCastOnline.com/SoilTemperature), initiate applications at the specified soil temperature and make sequential applications on a 28-day interval.
- Fairy ring applications must be made in conjunction with a soil surfactant program on a **14- to 28-day interval** as recommended by the product manufacturer. For preventive applications, soil surfactants can be made separately or tank mixed with Briskway, Posterity XT or Velistar fungicides.
- All applications must be **watered-in immediately with at least 0.15" of irrigation.**
- If breakthrough occurs, it is at the Syngenta territory manager's discretion as to what product to provide for rescue treatment and when or if a spot treatment or broadcast treatment is required. Breakthrough is defined as the appearance of fairy ring symptoms to levels that negatively impact the uniformity and playability of putting surfaces.
- The Assurance is limited to providing two recovery applications, up to the acres originally treated.
- Claims must be reported to a Syngenta territory manager.
- This program also assures **mini ring control** on bermudagrass/seashore paspalum and summer patch/take-all patch control on creeping bentgrass.
